

I don't *guess*.

I interview people, synthesise what they said, put something in front of them, and change it when the testing says I got it wrong.

PROJECTS

Agent X

Student project · Medieinstitutet Stockholm · 2026

01

How could contextual guidance help new players of Escape from Tarkov, a hardcore survival shooter, without flattening the difficulty its audience plays it for? I ran eight player interviews and synthesised them into two personas and a journey map, then designed four wireframe views and tested them in three think-aloud sessions.¹

¹ Run with teacher guidance as part of the UX programme. My first complete research cycle.

WHAT IT PRODUCED

Participants found and understood the guidance without prompting.²

² Testing also exposed language and sample limitations worth a further round.

USER RESEARCH SYNTHESIS WIREFRAMES USABILITY TESTING

Radio

Personal project · directing an AI-assisted iOS build · 2026

02

I built an internet radio player for iOS in a single working day without writing the code. I set the scope, ran a build agent, then ran a separate agent to audit its output, and tested the result on a physical device.³

³ The work was specifying it, questioning it and testing it. That is product management, not engineering.

WHAT IT PRODUCED

The audit caught four faults that all looked finished, and device testing caught a network failure that code review had passed.

APPROACH

How I work

Research that survives contact with users

Interviews, synthesis, personas, journey mapping, wireframing and think-aloud testing. So far that is one complete cycle, run as a student project at Medieinstitutet with teachers to steer me. I am looking for the role where it becomes daily practice.

Comfort with complexity and stakeholders

Twelve years running a regulated service business taught me to hold a system in my head, translate requirements into something workable, and decide with incomplete information.⁴

⁴ Swedish public healthcare procurement. Regulated, audited, and slow to forgive an error.

Sceptical use of AI tooling

I use generative and agent-based workflows daily, and I assume their output is wrong until tested. Auditing is the part that matters.

User interviews · personas · journey mapping · wireframing · usability testing · AI-assisted workflows⁵

⁵ Figma at a basic level. Enough to wireframe, not enough to claim it as a strength.

EXPERIENCE

STOCKHOLM
2012 – 2025

Founder & CEO · Konduko AB

Founded and led a specialist healthcare staffing company serving Swedish public healthcare. Designed the operating system connecting procurement requirements, physician availability, contracts, schedules, invoicing and quality control.⁶

⁶ Closed the company as a deliberate decision when the regulatory landscape shifted.

25+	140+	All regions	SEK 1.5B+	ISO 9001 & 14001
public procurement contracts	physicians on parallel assignments	framework coverage in Sweden	aggregate estimated value of awarded frameworks ⁷	certified operations

⁷ Procurement estimates, not guaranteed spend and not company revenue. Actual placements depended on regional demand and physician availability.

STOCKHOLM
2011 – PRESENT

Founder · NiyaCare Stockholm AB

A personal assistance company built around matching people with assistants they can rely on. Responsible for understanding individual needs, service quality and daily operations. It is where I learned what autonomy and trust actually require from a service.

BACKGROUND

Before this, thirteen years in visual communication

Athens, 1998 to 2011. Layout and print production first, then project coordination, branding, packaging and campaign work for fashion, food and professional services clients.⁸

⁸ I do not sell this as a current skill. Seventeen years since I worked as a graphic designer, and not what I am asking to be hired for.

It is why I read layouts quickly, and why briefing clients and defending a decision feel ordinary rather than daunting.

Graphic Designer, later Project Manager · Apolyto S.A.	1998 – 2009
Creative Consultant · Angelos Frentzos S.A.	2004 – 2011
Creative Consultant · Barbara's Food Company	2009 – 2010
Design Consultant · PricewaterhouseCoopers	2004 – 2009

EDUCATION

QUALIFICATIONS

UX Design · Medieinstitutet Stockholm	2026
Graphic Design · IIEK Technografiko, Athens	1996
